

Adekunle Ajasin University, Akungba-Akoko

Department of Computing Science

Course Code: SEN202

Project Title: Security Incident Mapping (SIM)

Software Requirement Specification (SRS)

Name: Ezekiel Okezie Joseph

NumberMatric: 241201152

Lecturer: Dr. O. O. Ajayi

Date: 7th Of July, 2026

1. Introduction

1.1 Purpose

The Security Incident Mapping (SIM) system is a web-based application developed to enable students, staff, landlords, and security personnel to quickly report security incidents occurring within and around the campus community.

The system aims to improve communication between community members and campus security by providing an easy-to-use online platform for reporting crimes such as theft, assault, rape, stabbing, murder, cultism, and other security-related incidents.

1.2 Scope

The SIM application allows users to:

- Register an account.
- Log into the system.
- Report security incidents.
- Upload evidence such as images.
- View submitted reports.
- Track the status of reports.
- Allow administrators to manage incidents and users.

1.3 Objectives

The objectives of the system are:

- Reduce campus crime.
- Improve emergency reporting.
- Increase student safety.
- Improve communication with security agencies.
- Maintain records of reported incidents.
- Help identify crime-prone area

2. Overall Description

2.1 Product Perspective

SIM is an independent web application that can be accessed through any modern web browser on computers and smartphones.

2.2 Product Functions

The system provides the following functions:

- User Registration
- User Login
- Incident Reporting
- Evidence Upload
- Crime Location Recording
- Report Status Tracking
- User Management
- Report Management
- Dashboard Statistics

2.3 Users

The system has five categories of users:

Student

Can:

- Register

- Login
- Report crimes
- View report status

Staff

Can:

- Login
- Submit reports
- View status

Landlord/Landlady

Can:

- Report incidents around student residences

Security Officer

Can:

- View reports
- Update report status
- Respond to emergencies

Administrator

Can:

- Manage users
- Delete reports
- Update reports
- View statistics
- Manage the system

3. Functional Requirements

FR1

The system shall allow users to register.

FR2

The system shall authenticate registered users.

FR3

The system shall allow users to report security incidents.

FR4

The system shall allow image uploads as evidence.

FR5

The system shall store the location of each incident.

FR6

The system shall notify administrators when a new report is submitted.

FR7

The administrator shall update the status of reports.

FR8

Users shall be able to view the progress of their reports.

4. Non-Functional Requirements

Performance

The system should load within three seconds.

Reliability

The application should be available 24 hours a day.

Security

Passwords should be protected.

Only authorized users should access administrative functions.

Usability

The interface should be simple and user-friendly.

Portability

The application should work on:

- Google Chrome
- Microsoft Edge
- Firefox
- Safari

5. System Requirements

Hardware

- Computer or Smartphone
- Internet Connection

Software

- HTML5
- CSS3
- JavaScript
- Web Browser
- GitHub

6. Database Design

Table: Users

Field	Type
User_ID	Integer
Full_Name	Varchar
Email	Varchar
Password	Varchar
Role	Varchar

Table: Incidents

Fields	Type
Incident_ID	Integer
Crime_Type	Varchar
Description	Text
Location	Varchar
Date	Date
Image	Varchar
Status	Varchar

Status Updated

User Views Progress

8. Benefits

- Faster crime reporting
- Better emergency response
- Increased campus safety
- Digital record keeping

- Better crime analysis
- Improved decision-making

9. Conclusion

The Security Incident Mapping (SIM) system provides a secure and efficient way for members of the campus community to report security incidents. It enhances communication between users and security personnel while helping to reduce crime through faster reporting and effective record management.
